

Bantam Florian

MAKING DIALYSIS PTA EASIER

During an angioplasty of a dialysis graft the operator has many things to deal with, such as keeping his hands out of the X-ray beam and managing the redundant catheter shaft and wire. Long catheters and wires can create problems.

The BANTAM FLORIAN catheter is specially designed to make Dialysis PTA procedures easier and faster by offering you smooth handling and full control with options for contrast injection through the sheath and the distal catheter tip.

FEATURES

EASY HANDLING

The 45 cm shaft precludes the need to manage long catheter shafts and guidewires during the procedure

FULL CONTROL

Contrast can be administered through both the sheath and the catheter allowing both the arterial and the venous part of the shunt can be visualised in one image

SMALL ACCESS SITE

Bantam Florian is 4F Sheath compatible(for 5mm), giving a small access site and helping to reduce bleeding complications

EXCELLENT PUSHABILITY

Bantam Florian features a Nylon Co-Axial shaft which transmits more push to the distal tip, allowing easier lesion access

LOW ENTRY AND TIP PROFILE

A low entry profile and a low profile, flexible tip allow tight lesions to be easily crossed

DURABLE BALLOON

The QuadFlex balloon is extremely burst resistant, ensuring safe, confident treatment of tough lesions

FASTER PROCEDURES

A combination of easy handling, full control, and easier lesion access mean that procedure time is potentially shortened

Bantam Florian Part Numbers

Catheter Length	Balloon Diameter	Balloon Length	Balloon Length
		40mm	60mm
45cm	5.0mm	47804050	47806050
45cm	6.0mm	47804060	47806060
45cm	7.0mm	47804070	47806070
