

ClearPAC Omega

The Last Word in 0.035" PTA Catheter Performance

The ClearPAC Omega features a combination of advanced technologies to give a new level of performance in a 0.035" PTA catheter.

Featuring:

Longest Balloon

The 220mm balloon, the longest on the market, allows for fewer inflations and potentially shorter procedure times

Durable Balloon Material

The QuadFlex balloon has exceptional durability, even in the most calcified lesions, as proved in recent registries. The balloon also has excellent rewrap characteristics, ensuring a low profile is maintained even after multiple inflations.

New Flexible tip

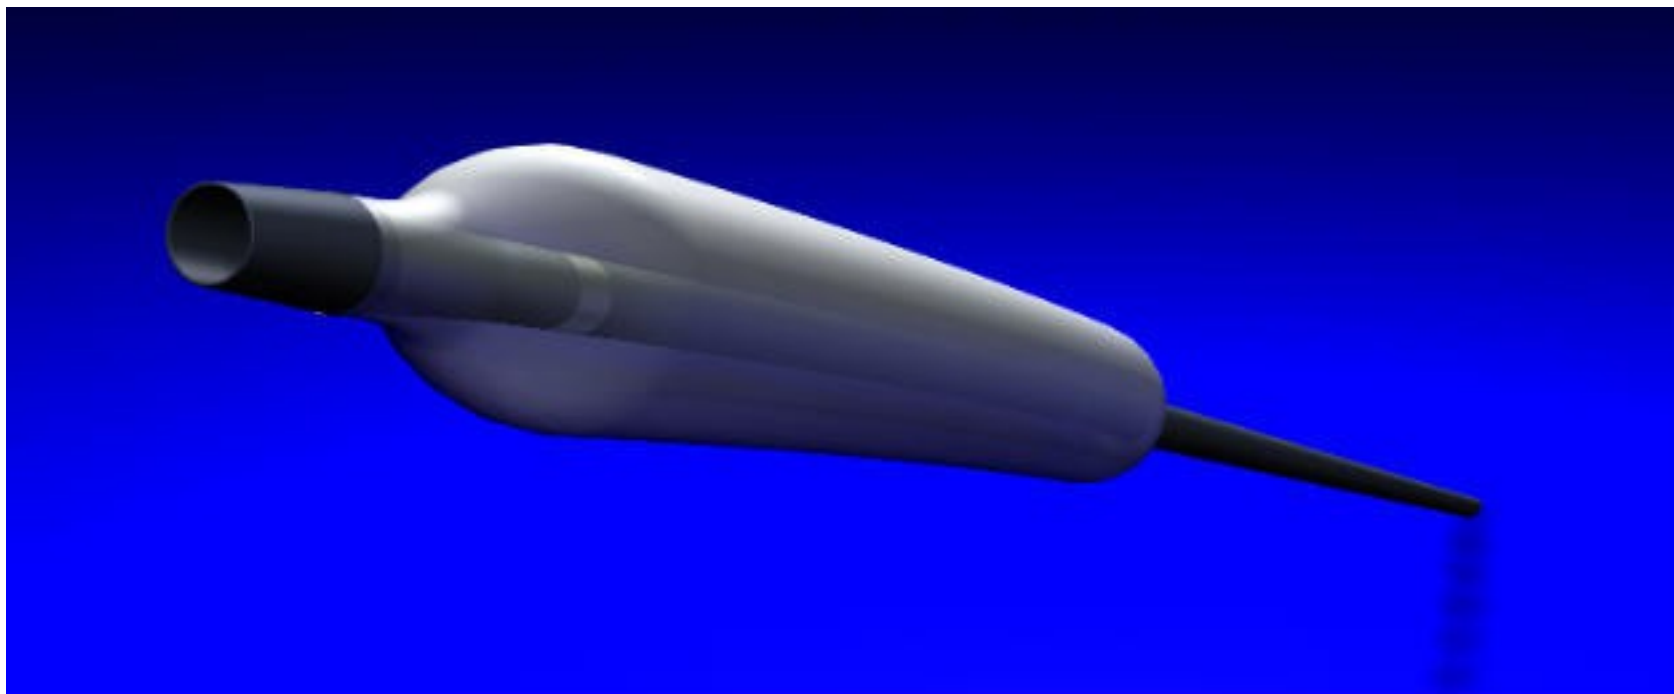

The new tip improves trackability, reduces vessel trauma, and allows easier lesion access

New Inner Shaft Construction

The Co-Axial Nylon shaft of the ClearPAC Omega gives excellent pushability, while the new inner shaft construction greatly improves trackability and prevents the balloon sticking on the wire after deflation

New 130cm Shaft Length

The 130cm Shaft is specifically designed for the contralateral approach

Catheter Length 75cm
