

ATLAS[®]

CONFIDENCE REDEFINED™

Large Diameter PTA Dilatation Catheter

A revolution in design and materials creates the next generation PTA dilatation catheter that redefines confidence in large diameter balloon angioplasty.

ATLAS[®]

CONFIDENCE REDEFINED™

Rated Burst Pressure

The Atlas[®] PTA Dilatation Catheter has rated burst pressures of up to 18 atmospheres, by far the highest rated burst pressures of any large diameter balloon.

Working Range

The Atlas[®] PTA Dilatation Catheter provides the versatility of the largest working range on the market. With a nominal pressure of 4 or 6 atmospheres, depending on size, the balloon has the flexibility to address a wide range of clinical needs by delivering either low or high pressures to the treatment area.

Profile and Deliverability

The low profile of the Atlas[®] PTA Dilatation Catheter allows for a less traumatic puncture site. The short, radiopaque tip increases accessibility within tortuous anatomy and the 0.035" wire compatible coaxial shaft design promotes rapid inflation and deflation.

Non-Compliance

The Atlas[®] PTA Dilatation Catheter features a composite material that provides the confidence of supreme non-compliance. A predictable diameter throughout the entire length of the balloon is designed to apply maximum dilatation force at the area of most resistance, the stenosis, rather than healthy tissue.

Ordering Information

Shaft Length		Balloon Size		RBP (atm)	Nominal Pressure* (atm)	Sheath Size (Fr)
75cm	120 cm	Diameter (mm)	Length (cm)

Please contact your Bard representative for availability of sizes.

† RBP (Rated Burst Pressure) : the pressure at which BARD has 95% confidence that 99.9% of the balloons will not burst at or below upon single inflation.

* Nominal Pressure : the pressure at which the balloon reaches its labelled diameter.
