

Nimbus Pico Mu

NIMBUS PICO μ

Low profile, High performance

The Nimbus Pico Mu is an Rx PTCA Catheter which has been especially designed to achieve pre-dilatation of challenging lesions. It features:

- LOWER PROFILE FOR EASIER LESION ACCESS

A new lower profile balloon and distal shaft allow access to difficult lesions. Nimbus Pico Miu features the lowest profile hypotube on the market which allows the kissing balloon technique to be performed through a 6F Introducer Sheath

- EXCELLENT TRACKING TO NAVIGATE TORTUOUS VESSELS

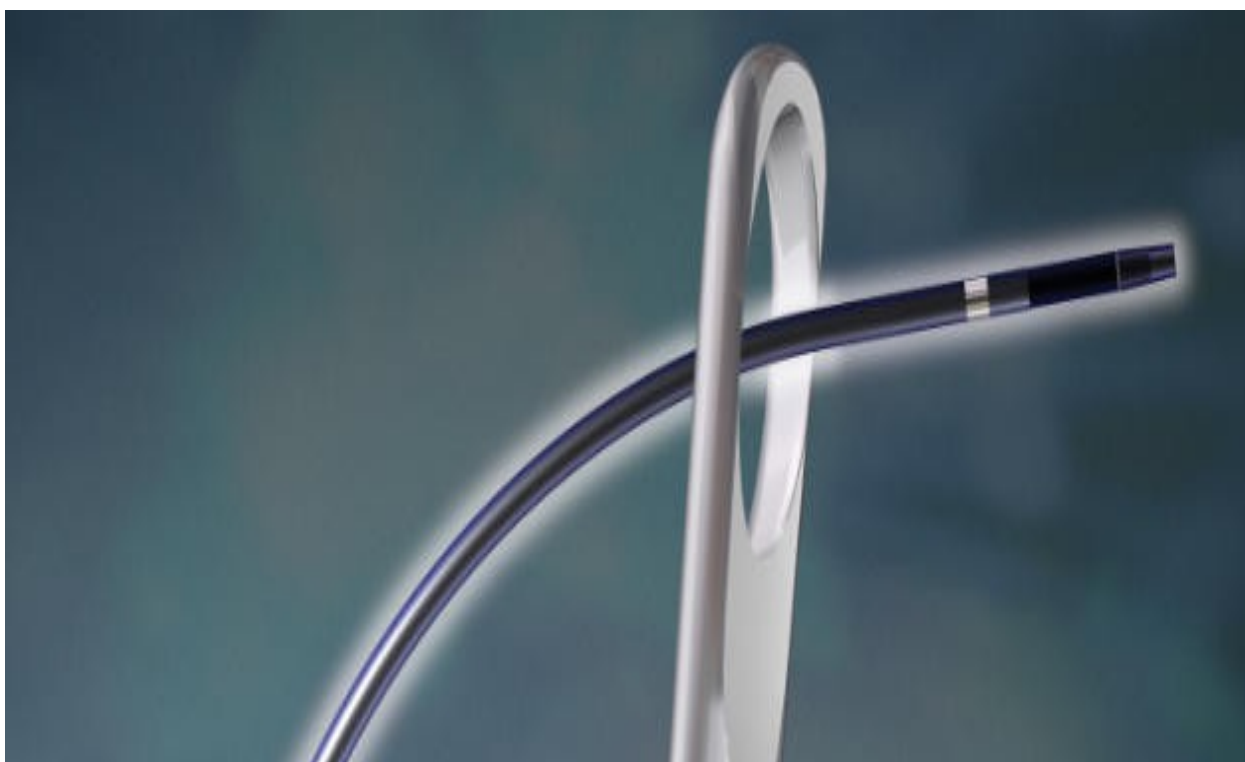

A new soft tip and flexible distal shaft allows Nimbus Pico Mu to track easily through tortuous vessels.

- ENHANCED PUSH TO REACH AND CROSS DIFFICULT LESIONS

A new shaft construction allows more push to be transmitted to the balloon tip without any buckling of the shaft. In addition XxtraFlex technology gives a smooth transition from the proximal shaft to the flexible distal segment. This allows greater push to be transferred to the tip whilst maintaining excellent flexibility

- EXCELLENT BALLOON DURABILITY AND SAFETY

QuadFlex™ balloon material is highly burst resistant, allowing confident treatment of even the most highly calcified vessels. The QuadFlex™ balloon does not 'dogbone' which prevents injury to the vessel wall outside the treated segment

Nimbus Pico Miu Part Numbers(Размерный ряд):

BAlloon Diameter	Balloon Length	Balloon Length	Balloon Length	Balloon Length	Balloon Length	Balloon Length
	9mm	12mm	15mm	20mm	30mm	40mm
