

ReeKross 18

100% push to address occluded peripheral vessels

NOW WITH 220MM LONG BALLOONS

INDICATIVE PRODUCT APPLICATIONS

The ReeKross18 is an innovative 0.018" over the wire PTA catheter design, based on ClearStream's successful 0.035" ReeKross. ReeKross18 has been reconfigured for the smaller guidewire but with the extraordinary 100% pushability of the ReeKross. The ReeKross18 is supplied with a 130cm shaft to allow the most distal lower limb vessels to be treated using the ante-grade approach.

DURABLE BALLOON

The ReeKross18 is equipped with ClearStream's acclaimed "QuadFlex" balloon noted for its durability in highly calcified vessels. The balloon is noted for its parallel surfaces, smooth inflation and perfect straightness and no "dog-boning".

LONGEST BALLOON

The balloons are supplied in the widest range of balloon sizes available on the market for PTA up to the worlds longest at 220mm.

APPLICATIONS

The ReeKross18 is recommended for use in all arteries in the lower limbs using the ante-grade approach. Given the extreme pushability the product is most suited for vessels with severe blockage or very high calcification. Where greater flexibility is required, (such as, for example, the plantar artery or other more tortuous vessels) the Bantam catheter may be a preferred choice.

ReeKross 18 Part Numbers

Catheter Length	Balloon Diameter	Balloon Length 40mm	Balloon Length 80mm	Balloon Length 120mm	Balloon Length 150mm	Balloon Length 220mm
